                                                                                                                                                                                                                                                                                                                                                                                                                                                          COFACTOR: BINDS ONE ZINC ION.
SUBUNIT: MONOMER (BY SIMILARITY).
SUBCELLULAR LOCATION: CYTOPLASMIC.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE);
ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          LDFPQHVSSDKEVRAASTEADKRLSRFDIEMSMRGDIFERIVHLQETCDLGKIKPEARRY 165

Taylor G.R., Otulakowski G., Lau C.Y., Munroe D.G.;

Submitted (DEC-1995) to the EMBL/GenBank/DDBJ databases.

-1- FUNCTION: INVOLVED IN THE METRABOLLSW OF NEUROPEPTIDES UNDER 20

AMINO ACID RESIDUES LONG. INVOLVED IN CYTOPLASMIC PEPTIDE
DEGRADATION. ABLE TO DEGRADE THE BETA-AMYLOID PRECURSOR PROTEIN
AND GENERATE AMYLOIDOGENIC FRAGMENTS.

-1- CAPALYTIC ACITVITY: PREFERENTIAL CLEAVAGE OF THE PHE-1-ALA BOND
IN SUBSTRATES CONTAINING -PHE-PHE-1-ALA-ALA-PHE- AND SIMILAR

-i- SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE):
ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Voet M., Volckaert G.;
Submitted (MAR-1992) to the EMBL/GenBank/DDBJ databases.
--- FUNCTION: COULD BE INVOLVED IN LATE STAGE OF PROTEIN DEGRADATION.
--- CATALITIC ACTIVITY: CLEAVAGE OF PRO--PHE AND ALA-1-ALA BONDS.
--- COFACTOR: BINDS ONE ZINC ION (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       LILLIGUEGAS AND SECULATED SECRET SOLE IN THE DEGRADATION OF SIGNAL PEPTIDES AFTER THEY ARE RELEASED FROM PRECURSOR FORMS OF SECRETED PROPIDES AFTER THEY ARE RELEASED FROM PRECURSOR FORMS OF SECRETED PROPIDES. CAN CLEAVE N-ACETYL-L-ALMA (BY SIMILARITY).

-!- CATALYTIC ACTIVITY: HYDROLYSIS OF OLIGOPEPTIDES, WITH BROAD SPECIFICITY. GLY OR ALA COMMONLY OCCUR AS PI OR PI'RESIDUES, BUT MORE DISTANT RESIDUES ARE ALSO IMPORTANT, AS IS SHOWN BY THE FACT THAT Z-GLY-PRO-GLY-I-GLY-PRO-ALA IS CLEAVED, BUT NOT Z-(GLY)5.

-!- COFACTOR: BINDS ONE ZINC ION (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO PEPTIDASE PAMILY M3 (ZINC METALLOPROTEASE); ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.

Conlin C.A., Miler C.G.;

Conlin C.A., Miler C.G.;

Cloning and nucleotide sequence of opda, the gene encoding and nucleotide sequence of opda, the gene encoding repetidase A in Salmonella typhimurium.";

Ulgopeptidase A in Salmonella typhimurium.";

I Bacteriol. 174:1631-1640(1992).

-! FUNCTION: MAY PLAY A SPECIFIC ROLE IN THE DEGRADATION OF SIGNAL PEPTIDES AFTER THEY ARE RELEASED FROM PRECURSOR FORMS OF SECRETED PROTEINS. CATALITY: THEY DESCRIPTION OF CIGOPEPTIDES, WITH BROAD SPECIFICITY. GLY OR ALA COMMONLY OCCUR AS PI OR P1' RESIDUES, BUT MORE DISTANT RESIDUES ARE ALSO IMPORTANT, AS IS SHOWN BY THE FACT THAT Z-GLY-PRO-GLY-PRO-ALA IS CLEAVED, BUT NOT Z-(GLX)S.

-! COPACTOR: BINDS ONE ZINC ION.

-! SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE);

C. -! CORNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STIMULATED BY MANGANESE, MAGNESIUM OR CALCIUM IONS AND REVERSIBLY INHIBITED BY ZINC, COBALT, AND IRON (BY SIMILARITY).
SUBDNIT: MONOMER (BY SIMILARITY).
SUBCELLULAR LOCATION: MITOCHONDRIAL MATRIX.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE);
ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.

"Cloning and nucleotide sequence of the Salmonella typhimurium dcp gene encoding dipeptidyl carboxypeptidase.";
J. Bacteriol. 174:1656-1630(1992).
-!- FUNCTION: REMOVES TROW THE C-TERMINI OF N-BLOCKED TRIPEPTIDES, TETRAREPTIDES AND LARGER PEPTIDES.
-!- CATALYTIC REMOVES OF UNBLOCKED, C-TERMINAL DIPEPTIDES FROM OLIGOREPTIDES, WITH BROAD SPECIFICITY. DOES NOT HYDROLYSE BONDS IN WHICH PI' IS PRO, OR BOTH PI AND PI' ARE GLY.
-!- COPROCTOR: BINDS ONE ZINC ION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: CYTOPLASMIC.
SIMILARITY: BELONGS TO PEPTIDASE FAMILY M3 (ZINC METALLOPROTEASE);
ALSO KNOWN AS THE THIMET OLIGOPEPTIDASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 TEELIVQTKQVYDAVGMLGIEEVTYENCLQ---ALADVEVKYIVE------RTMLDFP 109

Thinet oligopeptidase (EC 3.4.24.15) - rat
NyAlternate names: endo-oligopeptidase A; endopeptidase 24.15; Pz-peptidase; soluble
C; Specias: Rattus norvegicus (Norway rat)
C; Date: 30-Sep-1992 #sequence_revision 17-Nov-1995 #text_change 07-May-1999
C; Accession: S38760; A54152; S55999; A36165
R; McKie, N.; Dando, P. M.; Rawlings, N.D.; Barrett, A.J.
Biochem. J. 295, 57-60, 1993
A; Reference number: S38760; MUID:94029935
A; Reference number: S38760; MUID:94029935
A; Residues: 1-687 < MCK>
R; Pierotti, A.; Dong, K.W.; Glucksman, M.J.; Orlowski, M.; Roberts, J.L.
Biochemistry 33, 622, 1994
